

Cosmetology Complete Care

Bactronix is a supporter of the glamorous cosmetology industry. Our goal is to promote environmental health, safety and wellness throughout the cosmetology industry. Cross-contamination and the spread of dangerous bacteria can occur in an industry where you have close contact with other people. General surface areas, professional tools and makeup are large contributors to the spread of germs. In order to protect you and your client, we have developed a high performance, non-toxic, disinfecting technology.

Bactronix has developed **Cosmetology Complete Care** or **C3**, a hospital grade disinfectant, registered with the EPA and accepted by the USDA. Bacteria have become immune to the toxic chemicals in the typical cleaning products that we use today. **C3** is "green" and does not contain dangerous poisons such as bleach, hydrogen peroxide or alcohol. **Cosmetology Complete Care** is safe for people, plants, pets and the environment.

C3 is the perfect disinfectant to use on cosmetology tools and makeup products, especially those that are designed with advanced technology such as: infrared flat irons, lightstims, airbrushes and molecular hair setters. All of which will develop bacteria and biofilm. **C3** can thoroughly disinfect these new professional tools without compromising their life span or functional quality.

C3 is a new way to provide long lasting disinfection for the individual or professional beauty consultant. **C3** is the new standard for providing health and safety to the cosmetology industry. Become part of this non-toxic people and earth friendly disinfecting protocol.

WHERE TO USE C3

Surfaces

Before setting up for any service, spray 2-3 mists of **C3** depending on the size of your area, a small amount goes a long way. Wipe down and then apply again 2-3 mists and let air dry. Once dry, lay down a paper towel and begin to set up all tools. The same protocol can be used on your client's chair.

Tools

All tools used for any service should be sprayed 2-3 times, wiped and misted again to air dry. For any tool that is stainless steel or metal, spray 2-3 mists and wipe. If there is a substance on the surface that requires washing, **C3** is formulated for cleaning. For best results, apply **C3** in an ample amount to wash tool thoroughly and wipe dry. You can also wash with mild soap and water. Continue with the **C3** protocol.

Cosmetics

When preparing to use or put away cosmetics in palettes, spray 1-2 mists approximately 12 inches away from the component, and let air dry. **C3** is a non-toxic water based solution that will not dry out your makeup. The disinfecting power of **C3** has residual value and will continue to eliminate bacteria from cosmetics when stored back in your kit! When using pencils, first sharpen then apply a light mist of **C3** and let air dry.

Airbrushes

After use, pour a small amount of **C3** into the funnel of the airbrush gun and run for 30 seconds. This will disinfect and clean out any residual debris from the airbrush providing safety and maintaining optimum performance.
