

Cosmetology Complete Care

Bactronix is a supporter of the glamorous cosmetology industry. Our goal is to promote environmental health, safety and wellness throughout the cosmetology industry. Cross-contamination and the spread of dangerous bacteria can occur in an industry where you have close contact with other people. General surface areas, professional tools and makeup are large contributors to the spread of germs. In order to protect you and your client, we have developed a high performance, environmentally friendly, disinfecting technology.

Cosmetology Complete Care or C3 BactroKill® is an EPA registered, hospital grade bactericidal, virucidal, fungicidal, and pseudomonacidal disinfectant that is safe for people plants pets and the environment. Bacteria have become immune to the typical toxic chemicals that we use today. **C3 BactroKill®** is environmentally friendly and does not contain dangerous poisons such as bleach, hydrogen peroxide or alcohol. Such chemicals are also extremely dangerous for Cosmetologists to work with. C3 has revolutionized the industry!

C3 BactroKill® provides long lasting disinfection for the individual or professional beauty consultant. **C3 BactroKill®** is the new standard for providing health and safety to the cosmetology industry while meeting the highest of state infection control standards.

"Make the environmentally friendly switch today. The world is always changing, we have to change with it and make a difference!"

WHERE TO USE C3

Surfaces

Before setting up for any service, spray 2-3 mists of **C3** depending on the size of your area, a small amount goes a long way. Wipe down and then apply again 2-3 mists and let air dry. Once dry, lay down a paper towel and begin to set up all tools.

Tools

After each service, remove any debris or soil with warm water and mild soap. Following routine cleaning, spray each tool with **C3 BactroKill®** and wipe dry. Ensure thorough coverage, no rinse required. **C3 BactroKill®** is environmentally friendly and is great to use on any beauty salon or barber shop tool. See manufacturer's directing for directions for jar usage.

*Anything stainless steel should always be dried thoroughly

Cosmetics

When preparing to put away cosmetics after your service, spray 1-2 mists approximately 12 inches away from the component, and let air dry. **C3 BactroKill®** is a water based disinfectant that will not dry out your makeup. The disinfecting power of **C3 BactroKill®** has residual value and will continue to eliminate bacteria from cosmetics when stored back in your kit! Always follow your state guidelines and remove your cosmetics with a spatula and work from a pallet.

Airbrushes

After use, pour a small amount of **C3** into the funnel of the airbrush gun and run for 30 seconds. This will disinfect and clean out any residual debris from the airbrush providing safety and maintaining optimum performance.
