

Who is Bactronix?

Bactronix is a science based microbial control company that helps to create healthier environments using our eco-responsible products.

The exclusive Two-Step Bactronizing™ Process is applied with an advanced electrostatic delivery system. The Two-Step process will eliminate bacteria, viruses, mold and odor.

EPA Registered

Hospital Grade Disinfection Starts With The Bactronix **BATC** Program!

The Bactronizing Seal of Certification is a Symbol of Health and Safety

Cross-Contamination

Cross-contamination is a major concern throughout a veterinary facility. In such a high traffic area, the spread of dangerous infections such as Parvovirus, Salmonella, E.Coli, Campylobacter, as well as parasites and other infectious diseases can be easily spread. The Bactronizing Process reduces the risk by treating 100% of all surfaces.

Bionomics

Veterinary facilities can harbor bacteria and allow for cross-contamination. Bionomics is the study of these environmental conditions.

Assessment

Bactronix will perform a Bionomic Assessment to evaluate the biological condition of the veterinary facility. ATP test results are documented before and after treatment. This report provides record of reduced levels of microbial contamination.

Certification

Certification requires adherence to the protocol of the BATC program. Results are verified through Bionomic Assessment Reports.

Benefits of Bactronizing

- Antimicrobial Seal Of Certification promotes veterinary health, safety and wellness.
- Environmentally responsible Hospital Grade Disinfection brings greater safety and health to your animals, staff and yourself.
- Testing, reports and certification are beneficial for safety compliance to reduce risk and liability.
- Feature safer and healthier operations.
- Effective against the most powerful odors including skunk and cat urine!

Treatment

The Bactronizing Treatment Process uses an advanced electrostatic spray system to provide 100% coverage on all interior surfaces. This spray moves against gravity to coat difficult and hard to reach hidden surfaces.
