5.0 ★★★★★ **Rating on Google:**

"I was pleased with the service and the professionalism I experienced with Bactronix."

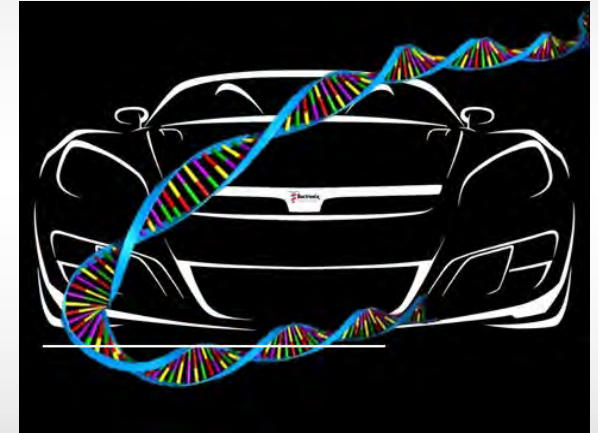

- Casey Purcell

"I had a mold condition in one of my buildings and Bactronix protected my tenants!"

- Lou Essey

Anti-Microbial "Bactronizing™"

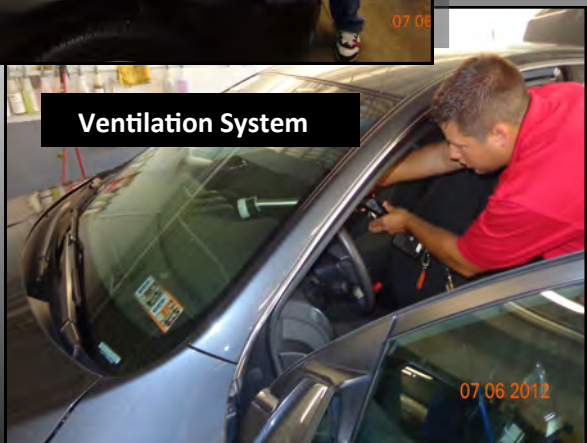

The "Biological Footprint" is Part of a Car's DNA

What is the "Bactronizing Process?"

The Bactronizing Process eliminates unwanted odors and removes the "biological footprint" from previously owned vehicles.

Bactronizing is an anti-microbial technology that is eco-responsible. Normal detailing cannot reach the bacteria harboring deep in a car's ventilation system and air intake units. With our process, there is complete anti-microbial coverage.

Treating Your Vehicle

The Bactronizing process uses an electrostatic spray system which kills bacteria on all interior surfaces of the vehicle including gear shifts, air diffusers, steering wheels and radio controls.

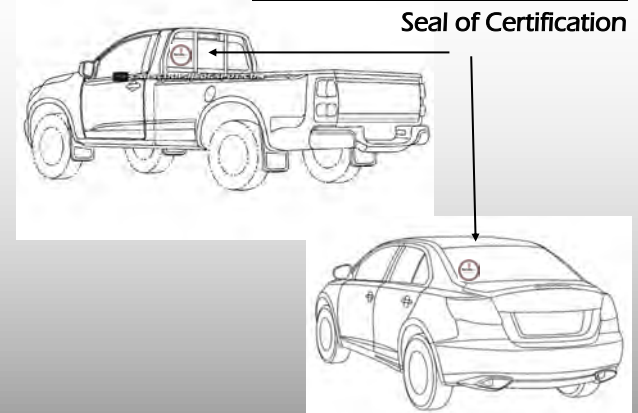

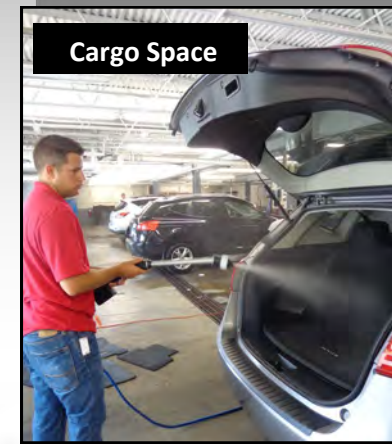

To eliminate odors, the treatment is sprayed throughout the interior cabin, ventilation system, air intake and cargo space.

Results:

When our process is complete, it promotes:

- Owner Health and Safety
- Increases Value of the Vehicle
- Eliminates Odors
- Seal of Certification

What Can You Do?

Ask your auto dealer to have your vehicle Bactronized!
