

Water Damage Cleanup for Homeowners and Businesses

Available 24/7, 365 Days a Year

Our Services Include:

- Cleaning the mess caused by broken pipes and failing plumbing fixtures or appliances. The experts at Bactronix have expertise in water damage cleanup.
- Cleaning up any flooding caused by severe weather, whether it be heavy rain or ground water flooding your basement.

Cleaning a home after water damage is an extensive and important task. Simple do-it-yourself drying techniques are often not enough when removing water from your home or office. Your carpet, walls and floor coverings are porous which means a simple cleaning will not suffice, and extensive water damage cleaning is required.

All surfaces affected by water damage must be thoroughly dried, cleaned, disinfected and deodorized by trained and certified water restoration professionals in order to eliminate disease-causing bacteria, fungi and other viruses before the area is safe for humans again. The actual cleaning and drying time of your contents is dependent upon the extent of the water damage. While some clean-up efforts can take 2 days, many may take longer.

When your plumbing fixtures fail, or when a storm hits your area, water can quickly become a problem.

If floodwater inside your home is not addressed promptly, your walls, as well as your carpet, flooring, ceiling and personal property can quickly become damaged, creating an environment for bacteria, rot and mold growth.

Bactronix is the most recognized company with the ability to "Fight the Invisible Enemy"

Water Damage Cleanup Service

For homeowners and businesses

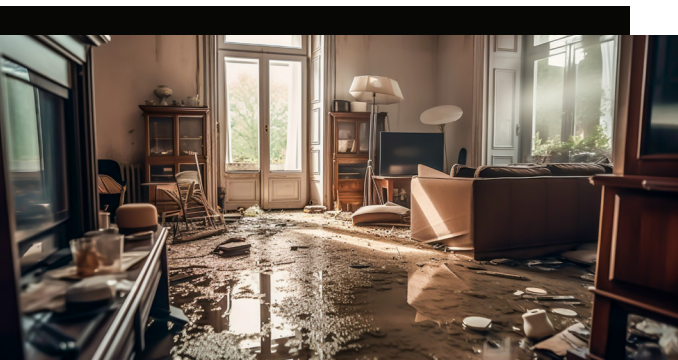

Cleaning, Drying, Disinfecting, and Deodorizing

Available 24/7, 365 Days a Year

Expert Protection

Bactronix's prompt and professional water damage cleaning experts are trained and certified to clean, disinfect, and deodorize areas affected by excessive water damage. We utilize an approved process that offers protection against bacteria, mold, mildew and odors, which includes the following crucial steps:

- Water extraction.
- Removal of non-salvageable possessions and structures, when applicable.
- Cleaning of contents and affected areas.
- Air cleaning using state-of-the-art equipment.
- Application of EPA registered, hospital grade anti-microbial agents applied through electrostatic spray equipment.
- Deodorizing by neutralizing odors.
- BAR (Bionomic Assessment Report).

Our Professional Water Damage Cleaning Process

Bactronix will promptly clean the contents of all areas affected by water damage, while removing any non-salvageable possessions, if applicable. Our extensive cleaning process includes the application of anti-microbial disinfecting agents and deodorizers, as well as air-cleaning utilizing our state-of-the-art equipment. The advanced Bactronix water mitigation equipment is not removed from your home or business until temperature, humidity and moisture testing confirms that all affected areas have been dried to acceptable levels according to industry certification standards. If the claim is covered by your insurance, Bactronix will send the bill for services directly to your insurance company, relieving you of the burden during a very stressful time.

Simple drying techniques are often not enough when removing water from areas it is not supposed to be. Your carpet, walls and floor coverings are porous which means a simple cleaning will not suffice, therefore extensive water damage cleaning is required. Surface cleaning only removes visible contamination, but significant quantities of microorganisms are often left behind, which can potentially cause health problems as well as unpleasant odors.

All surfaces affected by water damage must be thoroughly cleaned, disinfected and deodorized by trained professionals in order to properly eliminate disease-causing bacteria, fungi and other viruses before the area is safe for humans again.

Upon completion of the process **Bactronix will test and provide the customer with a BAR (Bionomic Assessment Report).**

Water Cleanup Services You Can Trust

The water damage restoration professionals at Bactronix are well trained and knowledgeable. They are accredited with Institute of Inspection, Cleaning and Restoration Certification (IICRC) and perform water restoration services in compliance with the IICRC S500 standards for professional water damage restoration, which means you are getting water damage cleaning, sanitizing and deodorizing services that you can trust.

Homeowners and businesses alike rely on the experts at Bactronix to remove water, and to clean and deodorize their home or business.

We understand the importance of prompt service in the event of a water emergency and are skilled in water damage cleaning to protect families, employees and customers against potential health issues caused by untreated moisture.
