March 2019- Bactronix Tips and Advice

Should you Have a Mold Inspection Before Buying a Home?

Purchasing a home is a big investment. The last thing you want to discover after you've moved in is a mold issue. In addition to a home inspection, always request a mold inspection.

Mold inspections are becoming common practice in real estate transactions. Today, many realtors advise their clients to have mold testing performed before purchasing and selling a home. For both sellers and buyers, a mold issue can be a deal breaker. When selling a home many sales are lost, and property values are reduced due to the presence and smell of mold. A home with a legit certification stating the home is healthy is a huge selling point.

Foreclosed or vacant properties are highly susceptible to mold due to the elements. The home usually doesn't have electricity and is without the HVAC running. With no HVAC, moisture can create mold concerns in various areas of the home. New homes on the other hand can also be susceptible because they are built very energy efficient. This is great for the electric bill but in some cases, due to lack of proper ventilation, mold growth can occur.

People are more aware than ever today of the dangerous health problems mold and mycotoxins can create. Read these facts and educate yourself! Call the Mold Inspectors at Bactronix today to help determine if your home is safe.

What are the Mental and Neurological symptoms from Black Mold?

The Trichothecene Mycotoxins produced by Black Mold are Neurotoxic. This means they can kill neurons in the brain, causing nervous disorders with symptoms like:

- Confusion
- Anxiety
- Depression
- Difficulty concentrating
- Slowed reflexes
- Disorientation
- Dizziness
- Memory loss
- Impaired learning ability
- Shock
- Hallucinations
- Numbness
- Tingling
- Aggression
- Trembling
- Shaking
- Seizure

What are the respiratory Symptoms from Black Mold?

Toxic Black Mold Mycotoxins create irritation and a burning feeling in a person's air passage such as nasal cavity, mouth and throat.

Can Black Mold cause soreness of the muscles?

Toxic Black Mold can cause soreness of the muscles and joints while it also makes a person tired and causes fatigue.

The symptoms are the following:

- Chronic fatigue
- Drowsiness
- Aches and pain
- Muscle pain
- Joint pain
- Malaise
- Headaches
- Cold or Flu type symptoms
- Fever
- Nausea
- Vomiting
- Diarrhea

What are the most common types of Mycotoxins?

- Aflatoxins (produced by Aspergillus)
- Ochratoxin
- Trichothecene (produced by Stachybotrys)
- Fumonisin
- Zearalenone

How do Mycotoxins enter the human body?

- By breathing through nose and mouth the Mycotoxins end up in your lungs
- Can enter through a person's eyes
- Some Mycotoxins (like Trichothecene) can be absorbed through the skin.

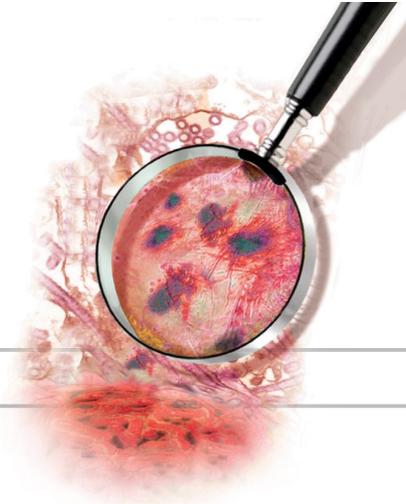

Mycotoxins cause toxic symptoms which are much worse than the allergic symptoms caused by ordinary mold. Some of the symptoms caused by toxic mold include bleeding, damage to internal organs, mental impairment, cancer and even death in some cases.

What are the most common symptoms that mold allergens cause:

- Cold or Flu like symptoms
- Irritated, itchy skin
- Skin rashes, hives
- Watery eyes
- Red bloodshed eyes
- Itchy eyes
- Hair loss
- Wheezing
- Sinus headaches
- Hay fever symptoms
- Shortness of breath

Commercial and Real Estate Highlights - March 2019

School Organizations Reach Out to Bactronix for Help in Controlling Mold

Recently, Bactronix was requested to speak with 25 school districts in Western Pennsylvania based on his professionalism and knowledge in mold control. Our Vice President, Vincent J. Valicenti made presentations in Erie, Pa, Cranberry Town-ship, Pa and Washington, PA for Keystone Purchasing Net-work's "Lunch and Learn" series. His educational presentation for mold remediation reached Facilities, Building and Grounds Directors, Superintendents, Board Members and Business Managers from the areas school districts. In spite of the weather, interested personnel attended these sessions and gave an average rating of 4.5 out of 5 stars for the presentation. The presentation outlined mold's existence from Biblical times, its ability to survive man's approach to eliminating it, testing procedures, products which fail to kill mold due to overuse like Penicillin's history, and new and improved products and equipment developed through new technology with proven abilities to manage mold growth. Attached is a picture depicting these presentations. If you would like a copy of the packet of information handed out during these presentations or would like to request a presentation for your school district, please contact Bactronix at 412-375-7886 or vvalicenti@bactronic.com and join the crusade . . . to "fight the invisible enemy."

Bactronix Testimonials

Angie's list

2-27-19 Brad Matthews of Monongahela, PA recently had Bactronix treat his basement and attic.
