May 2019- Bactronix Tips and Advice

Spring is here!

Allergy Season Has Arrived, What Are You Doing to Maintain Your Home?

Follow these tips and use BactroKill to reduce harmful allergens and much more!

BactroKill is the leading eco-friendly disinfectant that is proven to eliminate allergens, as well as, kill mold, bacteria and viruses.

BactroKill is safe to apply on any surface!

- Mist BactroKill weekly throughout the home. More than 60 percent of people with asthma also have allergies, and their asthma symptoms can be caused by exposure to certain triggers called "allergens." Many household allergens can be found in mattresses, pillows, rugs, furniture, plush toys, bathrooms, basements, attics, air ducts, and more. Some common allergens in the home include: **Dust mites, Cockroaches, Mold, Rodents, Pet dander, and Pollen.** Apply BactroKill on these surfaces weekly to maintain. Just mist and let air dry.
- Keeping a clean filter in your furnace ensures the unit operates efficiently and can keep dirt, dander, and debris from circulating back through your home. This can be a leading cause for allergy symptoms in your home. Use BactroKill and spray your furnace filter thoroughly on both sides once a month to maintain clean air.

*Spray your furnace filter
During allergy season
With BactroKill*

- Pay close attention to windows! Windows will accumulate condensation and mold. Apply BactroKill to a microfiber cloth and keep windowsills and frames free from mold and debris.

Bactronix is Your One Stop Shop in Creating a Healthier Home!

What services does Bactronix provide to Home Owners and to the Real Estate Industry?

1. Testing pertaining to Mold, Bacteria and Viruses
2. Testing for Air Quality
3. Testing for Sick Home Syndrome
4. Treating homes for Mold, Bacteria, Viruses and Bad Odors
5. Installing Vapor Barriers in crawl spaces or basements without floors
6. Removing compromised drywall, paneling and Insulation, due to water leaks or flooding
7. Provide Drying Service after water leaks or flooding
8. Provide Duct Cleaning Service
9. Provide BAR (Bionomic Assessment Reports), Detailed Quotations, LOR (Letters Of Recommendation)
10. Provide Certification and Transferrable Warranty Certificates
11. Provide Real Estate Training and General Information Presentations

Provide Quick and Competitive Service to avoid closing delays

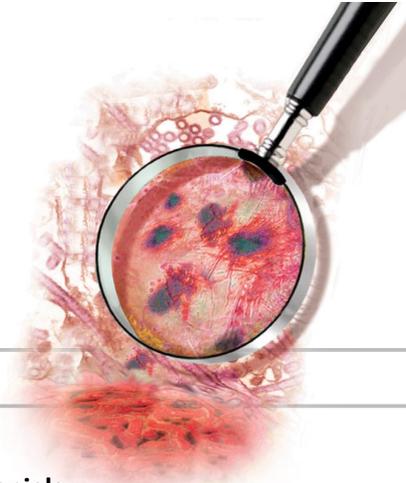

****Tips for Realtors! Very common Real Estate question:**

Should the home owner treat the home for mold before or after the Home Inspector inspects the home?

In case there is visible mold or a musty smell **always** contact Bactronix first, have them test and if necessary treat the home for mold and provide the seller with a transferable warranty certificate. When the buyer or the bank request a home inspection and the report shows mold, it can be a deal breaker or it can cause closing delays. In addition to that, the buyer becomes hesitant and may ask for severe price concessions.

May 2019-Commercial and Real Estate Highlights

During the first 4 months of 2019, Kyle Fisher from the West Chester University of Health Sciences and Environmental Health completed a study at Bactronix and wrote the following Statement of Purpose about the company:

Bactronix, a biotechnology company, founded on and rooted in proven scientific literature, is the most cost-effective mold testing and remediation company based on the most up to date scientific evidence, to clean, sanitize and disinfect micro-organisms in homes and commercial facilities, both living and non-living.

During testing and treatment, Bactronix has adopted practices from the National Institute of Health (NIH) that apply to health care and non-health care facilities for mold prevention and remediation as based on best practices determined in the field. Bactronix provides the most accurate and current guidance for response to water intrusion and mold contamination in alignment with best recommended practices by several governmental, institutional, and organizational researchers. Along with NIH, Bactronix also follows Environmental Protection Agency (EPA), United States Department of Agriculture (USDA), National Safety Counsel (NSC), National Science Foundation (NSF) and the United States Department of Housing and Urban Development (HUD) guidelines.

Based on several peer reviewed scientific journal studies, Bactronix has developed a system of testing and treatment that highlight highly precise and effective procedures in order to provide 100% purely science based and proven solutions to remediating micro-organism contamination in the home from the moment the Bactronix team arrives until the moment of finishing.

Using Bactronix services will not only assure the customer the best testing and monitoring practices are being used to detect potential hazard, but also the 100% highly effective and eco-friendly treatment will leave the homeowner (or buyer) safe and satisfied with the efficacy of the outcome of the Bactronizing Process.

Bactronix was honored to have Kyle apart of our team and we wish him well in his future.

"Bactronix scores 99.7 % on Customer Satisfaction."

Bactronix is the highest scoring company in Western PA when it comes to Customer Satisfaction in mold testing and remediation. The company has hundreds of written customer testimonials with an almost perfect "A" score. Jobs vary from mold treatment in a closet to tests and treatments of entire homes. We pride ourselves of being the best while keeping prices the most competitive in the industry. All of our Specialists are Certified Mold Inspectors and business professionals, while all of our technicians are highly trained and certified. Recently Bactronix was awarded the Angie's List Honor Roll Award for their perfect record.

Testimonials

Angie's list

Bactronix completely removed the mold in my parent's house. Bill Whitmer, Certified Mold Inspector, was very knowledgeable and helpful in telling us what all was involved in removing the mold. The process was started less than one week after the initial contact with the company. Stefan was our technician and he was very professional in going about the treatment. After he was finished, I looked over the areas treated and I saw no remaining mold. I am very happy with Stefan and the results he produced! I highly recommend this company if you are in need of mold removal.
-Susan Szymarek 4-23-19

Bactronix remediated mold in my basement and I am beyond impressed. I went from thinking I would need to rip out a whole finished basement in my new house to not even needing to paint. These results are even better than I expected.
